Title: webMethods Developer/Administrator	**Location:** Chicago, IL
Type: Direct hire – full time w/ benefits	**Industry:** Foods

Description:

Participates in the ongoing design, development, testing and documentation of webMethods solutions to meet business requirements. Responsibilities also include administration and maintenance of the webMethods environments and deployed production solutions.

Responsibilities:

1. Supports full life cycle (planning, analysis, design, development, testing, and deployment) of webMethods based solutions.
2. Supports sustained operations including troubleshooting production and QA issues of deployed webMethods based solutions.
3. Functions as an SME on webMethods based solutions (Integration Server, Broker Trading Networks, MWS and Designer) leveraging previous professional experience with webMethods to share technical knowledge with teammates.
4. Participates in code reviews to ensure the application design and related work products satisfy business requirements including assisting teammates to produce deliverables in compliance with standard procedures.
5. Provides necessary project management artifacts as required including status, project planning, and reporting.
6. Proactively identifies and communicates issues and risks to the team lead or end user to facilitate timely resolution.
7. Maintains system integrity and appropriate patches to support the health and long-term performance of the webMethods products and capabilities.
8. Follows and executes long-range requirements, operational guidelines, and security and integrity controls, including all the necessary process steps, information exchanges, and business rules.
9. Schedules, plans, and oversees webMethods server restarts, system upgrades, and applications fixes.
10. Responsible for webMethods code deployments and rollbacks of enhancements and new projects..
